Re: Application for Digital Workplace and IT Support Lead

Dear Mr. Milting,

I hope you are well.

I am writing to apply for the Digital Workspace and IT Support Lead position at Gubra. I am an engineer working in Cloud Governance at Deutsche Börse, and what draws me to this role is the chance to do hands-on technical work that leads to people bringing out their best work by building a reliable, well-run digital workplace that lets research, laboratory, and business colleagues focus on their work rather than on their tools. Having come from a research background myself, I also have a genuine feel for how research and laboratory teams work and what they need from technology.

In my current position, I own cloud service whitelisting across Azure and GCP company-wide in a heavily regulated financial services environment. I assess services against different security and compliance requirements, lead the recurring cross-team review call and act as the operational and technical point of contact for cloud service governance, collaborating closely with our security and infrastructure functions. This role has given me a strong foundation in IAM governance and in meeting the documentation and traceability standards that regulated organisations like Gubra rely on.

Many of my contributions focus on removing recurring operational friction through automation. I built RAG-based agents that automate a core governance review process and cut its turnaround by around 75%, and a scheduled agent that tracks cloud service updates and flags changes to the team. Earlier, as a product owner, I designed and shipped an internal AI assistant that our operations team now uses to resolve queries faster. I also built Power BI dashboards on service compliance and coverage that make service quality visible and measurable, which aligns with the metric-driven continual improvement your team is built around.

Across my product management and consulting roles, I have worked directly with international stakeholders, translating their needs into delivered solutions and being the person colleagues come to when something needs resolving. I care about the end-user experience and take real satisfaction in making technology simple and reliable for the people dependent on it.

I would welcome the opportunity to take professional ownership of Gubra's Digital Workspace services and to help shape how colleagues across the organisation experience technology every day. Continuous learning is central to how I work, as I am currently completing an M.Eng. with an active research thesis alongside my student role, on top of two -peer reviewed publications, and I promise to bring the same drive, together with a strong service mindset, to picking up new tools and environments quickly. I would be glad to discuss how I can contribute to Gubra's Digital Workplace function, and I thank you for considering my application.

Kind regards,

Subham Singh
